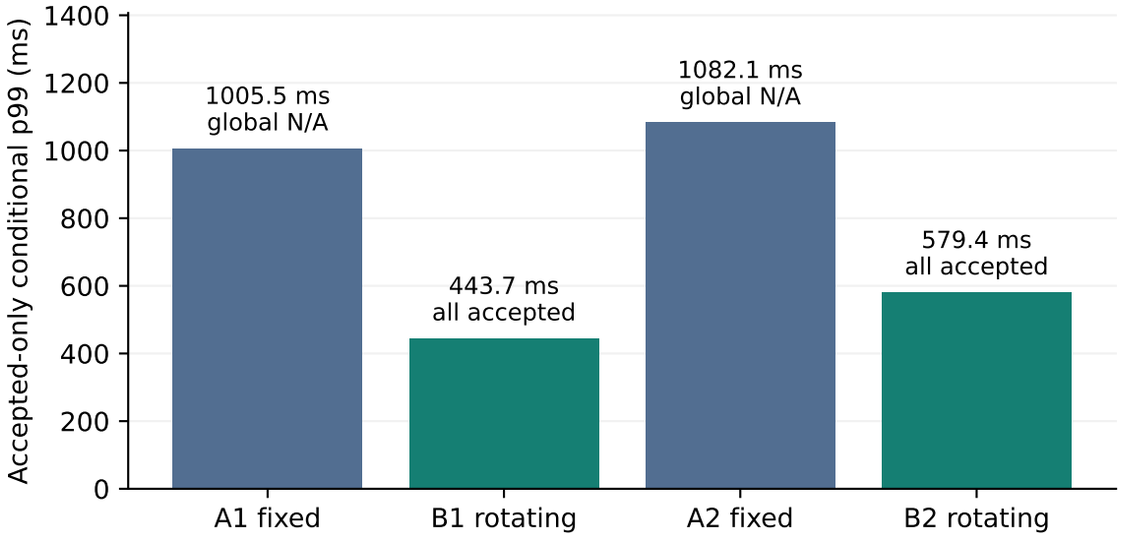
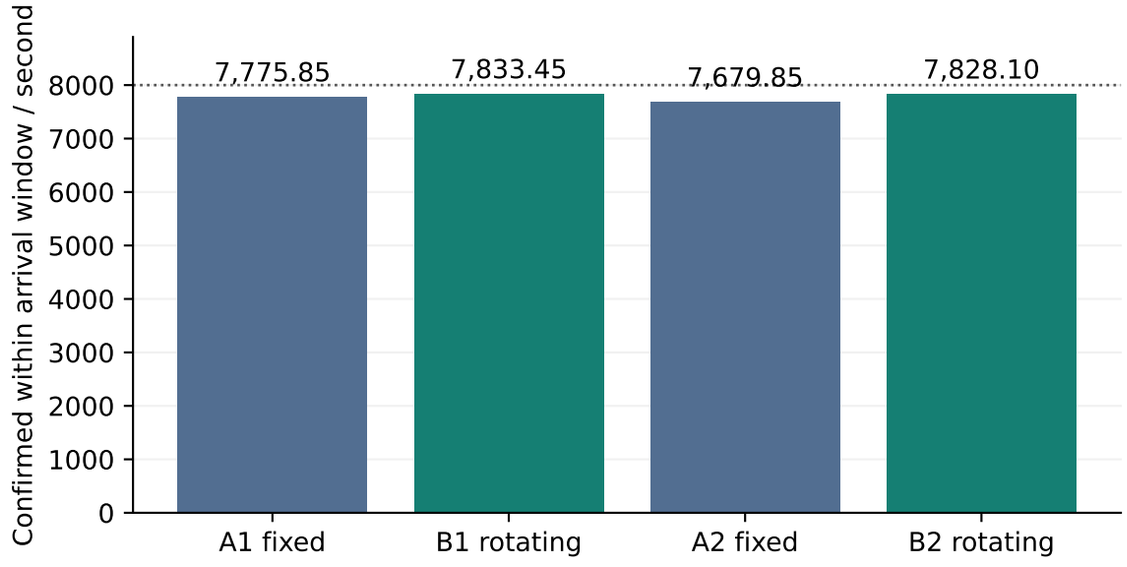
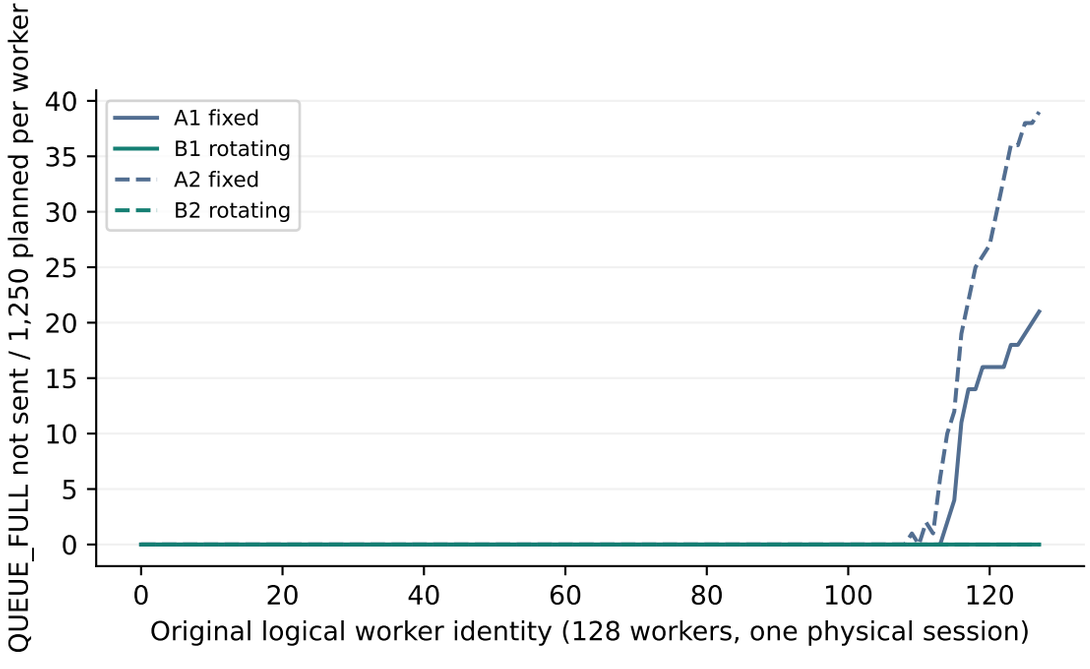
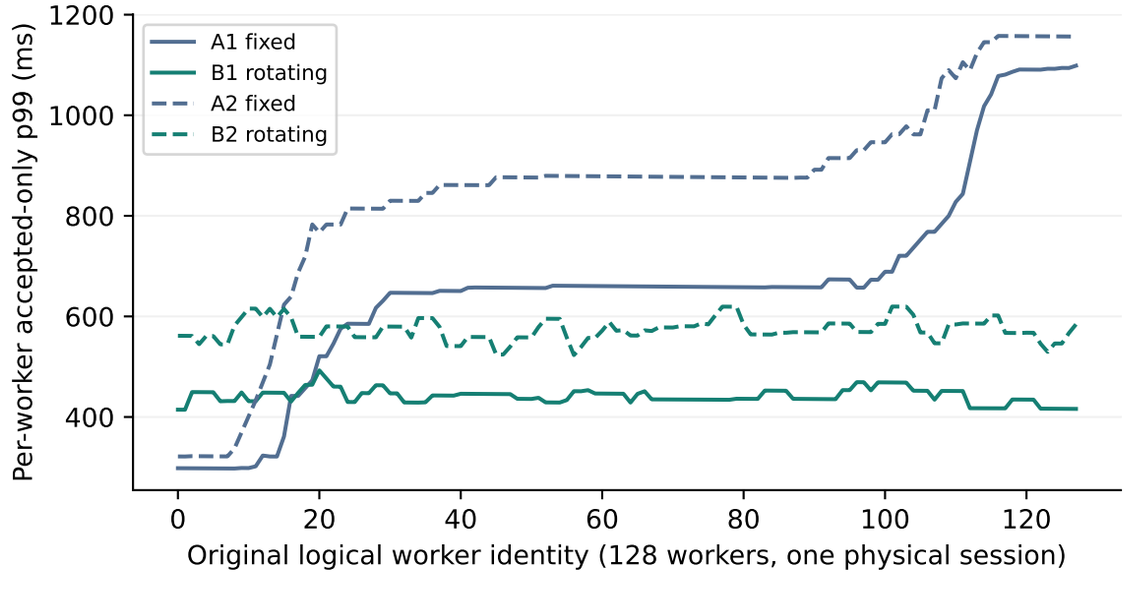
# VectorMatch: same-artifact dispatch fairness ABAB at 8,000 arrivals/s









Four fresh 20s lineages; leader0, sync2, read128/page32, batch4, W128/Q64, one CPU host / three JVMs / loopback UDP.
Every original outcome retained. Loss makes global successful-arrival p99 unavailable; conditional samples differ.
Finite observations, two pairs: no sustained-capacity, statistical-significance, hard-realtime or 100M claim.
